

The Moonlight Manuscript

Allen Girls Adventures

Allen Girls Adventures · Library Labyrinth Edition

Chapter 1 — The Letter Beneath the Door

The invitation arrived on a Tuesday, slipped under the door of the Allen family kitchen with no stamp and no postmark, only a wax seal pressed with the shape of a crescent moon.

Maya found it first. She was eleven and kept a reading journal with color-coded tabs, so she handled the envelope carefully, the way you handle something that already feels important.

"Read it aloud," said Alana, who was nine and had been trying to teach SPARK a card trick for forty minutes with mixed results.

Maya broke the seal. The letter inside was brief.

To the Allen sisters: the Labyrinth Library requests your presence on Friday evening at seven o'clock. A manuscript in the Starlight Reading Room requires young readers of curiosity, patience, and good note-taking. Please bring SPARK. Please do not be late.

No signature. Only a second moon pressed in wax at the bottom.

Natalia, eight years old and already cross-referencing the letter against a library map she kept tucked in her vest pocket, traced the Starlight Reading Room with one finger. "It's in the north annex. Under the glass dome."

SPARK hovered at shoulder height, its optics cycling amber-to-white in the pattern it made when processing something unusual. "Letter ink contains trace mineral compounds not available in standard commercial supply. Estimated age of paper: sixty to eighty years. However, ink dates to last week."

The sisters looked at each other.

"Old paper, fresh ink," Maya said.

"Someone wrote it recently on very old paper," Alana confirmed. "That's a sentence I'd underline."

They arrived on Friday at six fifty-five. The librarian on duty, a tall woman with reading glasses on a chain of knotted ribbon, led them through corridors that smelled of lemon oil and old bindings, up a spiral stair, and into the Starlight Reading Room.

The room was round. The ceiling was a glass dome through which a nearly full moon hung like a reading lamp. In the center stood a long oak table and on it, beneath a glass case, lay a book.

The pages were completely blank.

"We call it the Moonlight Manuscript," said the librarian, as if explaining something obvious. "It only works after dark."

She left without further instruction.

SPARK's optics cycled again. Natalia uncapped her pen. Maya pressed her palms flat on the table and looked up through the dome at the moon.

"We're going to need shifts," she said.

Chapter 2 — First Light, First Words

At eight thirty-seven, the moon crossed the lip of the dome and its beam fell directly on the open manuscript.

Maya saw it happen first. The pages, which had been smooth and cream-white and entirely empty, began to show ink. Not bleeding through from beneath the page, not appearing letter by letter, but revealed, the way frost on a window makes a pattern that was somehow always there.

"SPARK," she whispered. "Recording?"

"Recording," SPARK confirmed from the corner, its optics set to low luminance so as not to compete with the moonlight.

The text was handwritten in a flowing cursive that leaned slightly left, as if the writer had been right-handed but in a hurry. It read:

I was walking through a forest made entirely of doors. Each door was a different wood: cedar, birch, eucalyptus, something purple that smelled like rain. I tried the first door. Behind it was the same forest. I tried the second door. Behind it was also the same forest, but every door in this one was open.

"That's a dream," Alana said immediately.

"How do you know?" Natalia asked.

"Because it has that feeling. Where the logic is off but you don't notice until you say it aloud." Alana pulled her notebook closer. "I dream like this all the time."

Maya read on. The text continued for three pages, describing the door-forest in exact, peculiar detail: the way sound traveled wrong between the trunks, the smell of weather that never arrived, a figure in the distance always the same number of steps ahead no matter how fast the dreamer walked.

Then it stopped.

The next pages were blank again.

"Is there more?" Natalia asked.

SPARK floated above the case and scanned. "Approximately two hundred additional pages. Currently blank. Moonlight coverage will shift to the next section at approximately nine-fifteen."

They waited. The moon moved. New pages lit.

A new entry appeared, in different handwriting, blockier and younger-looking: I dreamed the library was underwater but all the books were dry.

"Different person," Maya noted. "Different dream."

"It's a record," Natalia said slowly, and everyone could hear the understanding arriving in her voice. "The manuscript records dreams."

"Whose dreams?" Alana asked.

Maya looked around the dome room, at the curved walls and the long table and the soft lamp on the side shelf.

"People who fell asleep here," she said. "In the library."

Chapter 3 — Maya's Shift

They agreed on three shifts. Maya would read from nine to midnight. Alana from midnight to three. Natalia from three to dawn. SPARK would rotate with them, monitoring moonlight angles and transcribing anything that appeared too briefly for human reading speed.

Alana and Natalia took the armchairs in the far corner with blankets from the librarian's cabinet — a cabinet that turned out to contain exactly three blankets, which none of them commented on because it seemed deliberately prepared. They were asleep by half past nine, which was faster than either of them expected.

Maya sat alone with the manuscript.

The moonlight moved in a slow diagonal across the pages. New text revealed itself every twelve to fifteen minutes, always in a different hand, always describing something that could only be a dream.

A woman had dreamed of her childhood kitchen, every object impossibly detailed: the chip in the second mug on the left, the smell of burnt toast and cardamom. A child had dreamed of flying, but only at exactly the height of the tallest hedge, skimming the garden like a paper plane with opinions. A man had dreamed of a conversation he wished he had started years ago, and the dream version had gone well.

Maya wrote summaries in her journal. She noted the handwriting styles, the approximate age of each entry by ink color and paper tone, the emotional register — longing, wonder, amusement, fear, peace.

"SPARK," she said quietly, "how old are the oldest entries?"

SPARK cross-referenced its scan data. "The deepest pages register paper and ink compounds consistent with late-eighteenth century. The most recent entry we have observed appears to be approximately three years old."

"Two hundred years of dreams," Maya said.

"Two hundred and some," SPARK corrected, which was not comforting but was accurate.

At eleven-forty, a new entry appeared in a small, careful script:

I dreamed the books in the library were telling each other stories. Not the stories inside them. New ones. Things that happened to them: who dog-eared them, who cried reading them, who fell asleep on page forty-seven. They had opinions about this. Strong ones.

Maya laughed softly so as not to wake her sisters.

She read until midnight, filling four pages of her journal. When she went to wake Alana, she paused and looked back at the manuscript, moonlit and patient.

She thought: I wonder whose dreams are written here that they never told anyone.

She did not know yet that before morning, she would find her own.

Chapter 4 — SPARK Investigates

While Maya slept and Alana took the chair at the manuscript table, SPARK performed what it called a systematic materials assessment and what Natalia, half-asleep in the armchair, called snooping.

SPARK did not argue the point.

The manuscript case was glass-fronted with a brass lock of considerable age. The case itself was mounted on a base that contained, SPARK discovered by quiet panel removal, a shallow drawer. Inside the drawer: a catalog card in faded ink listing the manuscript's acquisition date as unlisted, donor as anonymous, and condition notes that said only: do not expose to direct artificial light.

SPARK photographed everything and replaced the panel precisely.

The ink within the manuscript was unlike any archival ink in SPARK's reference database. Ordinary iron gall ink oxidizes brown over decades. This ink had maintained its deep blue-black regardless of entry age. The newer entries were the same shade as entries from two centuries prior.

"Anomalous," SPARK noted in its log.

More unusually: the paper showed no evidence of aging in the sections that had never been exposed to moonlight. The oldest pages in the manuscript's center were as supple as the freshest ones at the front.

SPARK floated to the dome and angled one optic toward the night sky. The moon was full enough tonight that the dome would receive usable coverage for another four hours. Thinner nights — quarter moon, overcast — would reveal less. On moonless nights, presumably nothing at all.

Alana, reading at the table, called softly, "SPARK. There's an entry in here that mentions the dome."

SPARK descended and read over her shoulder.

I dreamed the glass dome was a lens and the whole library was a camera and the moon was taking a very slow photograph of everything that had ever happened inside. I don't know what it did with the pictures.

"A lens," Alana said.

SPARK processed this. "Architecturally, the dome's curvature does concentrate and direct moonlight to the table's center. The alignment is too precise to be incidental."

"So the room was built for this," Alana said.

"The room was built for the manuscript," SPARK agreed.

Alana looked at the blank pages ahead, waiting for the moonlight to find them. She thought about all the people who had sat here before, who had slept and dreamed and never known the dream had been kept.

"They didn't know," she said.

"Most didn't," SPARK said. "Whether the manuscript requires awareness to record is an open question."

Alana chewed her pencil eraser. "One way to test that."

"Please do not fall asleep on purpose," SPARK said, which meant it had already predicted she would consider it.

Alana smiled and said nothing, which was its own kind of answer.

Chapter 5 — Alana's Shift

Alana had inherited from their mother a talent for staying awake past the point where everyone else had given up, and from their father a talent for falling asleep inside moving vehicles, cozy chairs, and apparently any room containing a glass dome and good blankets.

She lasted until two-fourteen before her head settled against her arm.

SPARK did not wake her. It had been thinking about this since her remark about testing, and it had decided that documentation was more valuable than intervention. It widened its optic aperture to low-light maximum and watched.

At two-twenty-one, new text appeared on the current moonlit page.

The handwriting was Alana's.

SPARK transcribed it immediately:

I was in a library but all the call numbers were feelings instead of subjects. The shelves were organized by how a book made you feel when you reached the end: relieved, changed, lonely, full. I was looking for a book that made you feel like you'd just heard a really good secret and the secret was actually fine. I found it on the third shelf from the bottom in the section marked understood. The cover was the color of the feeling you get when someone saves you a seat.

SPARK read this twice. Then it saved three copies in separate memory partitions, which was what SPARK did when something seemed important enough to lose would be a problem.

Alana slept on.

The moonlight moved. Three more entries appeared before three o'clock, all in unfamiliar hands, all dated by context to different decades. A teenager had dreamed of becoming very small and living inside a word she liked the sound of. A scholar had dreamed every language sounded the same and the sameness was beautiful rather than confusing.

At two fifty-eight, Alana stirred.

SPARK closed the transcription record quickly — not to hide it, but because timing mattered.

Alana lifted her head, blinked at the manuscript, and said groggily, "Did anything come through?"

"Several entries," SPARK said. "Including one in your handwriting."

Alana went very still. Then she looked at the page where her dream entry sat in her own cursive, perfectly formed, described in detail she had not consciously composed.

"I didn't write that," she said.

"You didn't have to," said SPARK.

Alana read it slowly, three times. Then she reached across and gently shook Natalia awake for the final shift.

"You need to see what I found," she said. "And also, I think I need to find that book."

Chapter 6 — The Dreamer in the Margins

Natalia was the most systematic of the sisters. While Maya catalogued and Alana theorized, Natalia cross-referenced. She kept index cards in her vest pocket organized by color: blue for confirmed facts, yellow for probable deductions, red for things that needed more information.

She used a lot of red cards.

By three-fifteen, she had made a chart on the blank back page of her notebook:

Evidence column one: manuscript contains dreams. Evidence column two: dreamers did not consciously write the entries. Evidence column three: entries span approximately two hundred years. Evidence column four: our visit was anticipated — three blankets, correct number of chairs, invitation on sixty-year-old paper.

"Someone expected us to sleep here," she said.

"Someone expected someone to sleep here," SPARK corrected. "Whether that someone was specifically you is a separate question."

"The wax seal was a moon," Natalia said. "The dome collects moonlight. The manuscript needs moonlight. The invitation was sealed with the symbol of the manuscript's power source." She paused. "That's either a coincidence or a person with a very specific sense of humor."

SPARK did not respond to that, which Natalia took as agreement.

At three-forty, the moonlight reached a section of pages near the manuscript's center. These entries were older — the ink had a gray-blue quality, the handwriting rounder and more formal in the style of older penmanship instruction.

One entry read:

I dreamed the stars were names. Not constellation names, which are invented, but actual names — each star had been given a name by the first person who ever looked at it alone and felt less alone for looking. The names were in every language at once and still made sense. I tried to count them and of course could not and of course did not mind.

Natalia copied it onto a blue card.

"SPARK, can you estimate the number of individual dreamers in the manuscript?"

SPARK scanned. "Handwriting analysis suggests between three hundred and four hundred distinct contributors across the full manuscript."

"And they all slept in this room."

"This room or this location, if the building has been modified. Yes."

Natalia looked at the dome overhead. The moon was past its apex now, beginning its slow western decline. Time was narrowing.

She found Maya's section first — the dream of the door forest, which Maya had described at the beginning of her shift. Then Alana's entry about the library organized by feelings.

She put a blue card beside each one. Confirmed.

Then she looked at the blank pages still ahead in the moonlight's path, and the red cards in her hand, and the morning beginning as a thin gray thought beyond the dome.

"I want to find who built this room," she said. "And I want to know if they're still watching."

Chapter 7 — The Old Names

At four in the morning, the manuscript's moonlit section reached its oldest pages.

The paper here was thicker, almost vellum, and the entries were sparse — sometimes only two or three lines on a full spread. But the writing held an intensity that pressed through two centuries. These were not people describing strange landscapes or impossible physics. These dreamers had used the manuscript to keep something they were afraid to lose.

Natalia read carefully. SPARK translated period vocabulary and archaic phrasing in a low murmur beside her.

An entry in faded sepia ink:

I dreamed my mother's voice, which I had begun to forget. In the dream she was reading to me. I do not remember the words only the voice. I was glad when I woke that some part of me still knew it.

Natalia stopped.

She sat with that for a moment, which is what you do with certain lines in certain books. Then she turned the page.

A younger hand, looping and enthusiastic, probably a child:

I dreamed I invented a color that didn't have a name. It was between orange and the smell of fresh pencil shavings. In the dream everyone could see it and they were very impressed. I was going to tell them what to call it and then I woke up. I am very cross about this.

SPARK produced what was almost a sound of amusement.

Natalia smiled without meaning to. She turned more pages.

Near the manuscript's very center, where the binding was thickest, the moonlight found a page unlike the rest. Instead of a single dream entry, this one held a diagram: a rough plan of the Starlight Reading Room, showing the dome, the table, and the precise angle of winter moonlight at two in the morning. In the margin beside it, a note:

The manuscript does not take. It keeps. There is a difference. What is dreamed here does not leave the dreamer. It is only also here.

Below this, a second note in different ink, added later:

And so the room became a library inside the library. Not of books. Of the things books make people dream.

Natalia read it three times. Then she looked at the room around her: the curved walls, the dome, the long oak table, the case, and her sleeping sisters in their armchairs, and SPARK floating quietly in the corner with its amber optics.

She wrote carefully in her notebook:

The manuscript is not a record of what people dreamed. It is a record of what reading did to them while they slept.

She put a blue card over that.

It stayed blue.

Chapter 8 — The Oldest Entry

SPARK found the oldest entry at four-thirty-one, in the very last fold of the manuscript's spine, where the pages had been sewn in with thread that had once been red and was now a faded coral.

It was written in two languages simultaneously: the left page in an older form of English, the right in what SPARK identified as Latin with unusual grammatical construction. Both said the same thing. Natalia worked through the English while SPARK translated the Latin, and they arrived at the same place.

I built this room because I had read every book in this library and could not stop dreaming about them afterward and I wished to know if I was alone in this.

I was not.

Three hundred years of evidence confirm I was not.

If you are reading this: you were also not alone. Every dream that came to you in this room was a reply to every other dream in this room. The manuscript is correspondence. The moonlight is the postal route.

I do not know your name. But I know you slept here, and I know something in you answered the same things that answered in me, and that seems worth recording.

Please leave the room tidy.

Natalia read this aloud for her sisters, who had woken — Maya at the first line, Alana by the second — and come to kneel beside the case with sleep still in their eyes.

No one spoke for a long moment.

Then Alana said, "Correspondence."

"Letters you send by dreaming," Maya said.

"To people you'll never meet," Natalia added.

SPARK's optics cycled slowly. "The individual who built this room could not have known their dreams would be read. They left the record because the alternative was the record existing for no one."

Maya looked at the page. "They left it in case someone like us came."

"Someone like anyone," Natalia said. "I think they would have been happy with any reader."

Outside the dome, the sky had begun its change from black to the particular dark blue that comes just before the first gray light. The moon was low now, its beam narrowed to a thin slant across the manuscript's last pages.

New text appeared in that narrowing light.

It was in Maya's handwriting.

And then Alana's.

And then Natalia's.

Three dreams from three hours of sleeping, recorded on paper that had waited two centuries and three weeks for exactly these readers.

Maya put her hand flat on the case. Not opening it. Just touching.

"We're in it," Alana said.

"We always were," said Natalia. "We just didn't know the address."

Chapter 9 — What Natalia Dreamed

Maya's entry came first on the page, and it was the door forest she had described hours ago: the cedar and birch and purple-wood doors, the figure always ahead, the second forest where every door stood open.

"I told you about that at the beginning," Maya said, slightly unsettled. "How does it know what I said?"

"It may have recorded during your telling," SPARK said. "The manuscript's active condition appears to be moonlight plus proximity plus sleep. Whether waking narration counts as a form of transcription is unexplored."

"It heard me," Maya said.

"It listened," Natalia said, which was different.

Alana's entry was the library organized by feelings, word for word what SPARK had transcribed at two-twenty-one. Alana read it silently, then aloud, and looked both proud and strange in the way of someone hearing their own voice played back from somewhere unexpected.

Natalia's entry was last.

They had not heard Natalia describe her dreams because Natalia had been the one reading, not sleeping. She had stayed awake for the full third shift, red and blue cards sorted neatly, notebook filled, completely alert.

But the manuscript said otherwise.

At five-oh-six, while Natalia had been reading the oldest entry, the moonlight had found a section of pages just behind the spine fold and revealed four lines in Natalia's precise, narrow hand:

I dreamed I understood the filing system. Not this library's. The system underneath all systems. The one that decides why certain things belong together even when they seem unrelated. It was very simple. Simpler than I expected. In the dream I thought: I will remember this. I woke up and did not remember this. But I remember that I understood it.

Natalia read this twice. Then she started laughing, the quiet indoor variety, shoulders moving.

"I don't remember the dream," she confirmed.

"The manuscript does," said Maya.

"That's the deal, apparently," Alana said. "You sleep here, it keeps a copy."

Natalia looked at her entry once more. "I dreamed I understood the filing system," she said, in a different tone now, not amused but wondering. "And I still don't remember what it was."

"Maybe that's the point," Maya said. "It's kept for you. You can come back."

The sky through the dome had shifted to silver. The moonlight was nearly gone, the last thin slant retreating across the table toward the far edge of the manuscript case.

New pages. New entries. The manuscript accepting more correspondence, from dreamers in other rooms, in the library's deeper quiet, in a night still generous with its last dark hour.

Then the beam withdrew.

The pages went blank.

Chapter 10 — The Librarian Speaks

The head librarian arrived at six-fifteen with a tea tray, which told them she had been expecting to arrive at

six-fifteen with a tea tray.

Her name was Dr. Vessels. She was not the librarian who had led them to the room — that had been a junior colleague. Dr. Vessels had white hair, ink-stained fingers, and the manner of someone who had answered the same important questions many times and had no intention of making the answers shorter.

She poured four cups, including one she set near SPARK's hovering position without comment.

"You found the builder's note," she said.

"The oldest entry," Maya confirmed. "The one about correspondence."

Dr. Vessels nodded. "She was a former library director. Eighteenth century. Collected every manuscript she could find, read all of them, and spent her retirement dreaming about their contents every night."

"She built the room to find out if anyone else did the same," Natalia said.

"She suspected that books don't just end when you close them," Dr. Vessels said. "She thought reading continued in sleep, in the way music stays in the body after the concert ends. She built the dome and commissioned the manuscript to test the idea."

"Was she right?" Alana asked, though the answer was in the case behind her.

"Three hundred and twelve confirmed contributors across two hundred and nineteen years," Dr. Vessels said. "I'd call that persuasive."

SPARK had a question. "The manuscript ink does not age. It is the same depth regardless of entry century. What is the ink's composition?"

Dr. Vessels folded her hands. "We don't fully know. The original director's notes describe extracting something from the dome's glass — a residue left by concentrated moonlight over many years. She combined it with standard iron gall and something botanical she called night-fix, formula now lost."

"The ink is made of moonlight," Maya said.

"Partially." Dr. Vessels smiled. "Light doesn't age. So the ink doesn't either."

The sisters sat with their tea. Outside the dome the morning was silver and soft.

"Why us?" Natalia asked. "Specifically."

Dr. Vessels looked at her steadily. "The library invites young readers every two or three years. People who might become the kind of adults who look after things like this. The original director left instructions." She paused.

"Also, I read your reading journals. You three take good notes."

Maya looked at her color-coded tabs and said nothing, which was a kind of gratitude.

"What happens now?" Alana asked.

Dr. Vessels stood and collected the cups.

"Now you decide whether you want to come back."

Chapter 11 — What Remains When Morning Comes

By seven in the morning, every entry in the manuscript was gone.

The pages were cream-white and smooth, exactly as they had been when the sisters arrived the evening before. No trace of ink, no impressions in the paper, no residue of three hundred contributors and nine hours of moonlit reading.

"Does this happen every night?" Alana asked.

"The text requires active moonlight to be visible," SPARK said. "It does not disappear. It becomes unreadable to us. The same ink exists in both states."

"Like invisible ink," Natalia said.

"Like invisible ink that only one kind of light can read," Maya said.

She stood over the case and looked at the blank pages. She thought about the door forest and the figure ahead that never got closer. She thought about the woman who had dreamed her mother's voice and been glad not to have forgotten it entirely. She thought about the child who invented a color and woke up cross.

"The entries are still there," she said. "We just can't see them."

"Until next time," said Natalia.

SPARK organized its transcription files from the night and presented Natalia with a full archive: every entry observed, timestamped by moonlight angle and page position. Three hundred and eleven entries, plus the three belonging to the Allen sisters.

"You have readable copies," SPARK said, "even when the manuscript cannot show them."

Natalia looked at the archive and then at the blank manuscript. "They're not the same, though. Reading it from a screen is different from reading it in the moonlight."

"Most things are different from what they were," Maya said. "That doesn't make the copy worthless."

Alana had been quiet for several minutes, standing by the dome window. "Do you think the people in there know

we read them?"

No one answered for a moment.

"I think they wrote for the possibility of being read," Natalia said finally. "Like anyone who writes. You can't know who finds it. You leave it anyway."

Outside the dome, the Labyrinth Library was waking. Corridors filled with morning librarians and the sound of carts and keys and the first visitors waiting by the door in the chill.

Dr. Vessels stopped in the doorway on her way out.

"The reading room is reserved," she said, "the next full moon."

She left the key on the table.

Maya picked it up. It was small and brass, shaped unremarkably, the kind of key that could fit any library anywhere. But it was heavy for its size, and warm, and when she turned it in her fingers she thought she understood, for one moment, what the filing system under all systems might be.

She did not try to name it.

She put it in her pocket.

Chapter 12 — The Next Full Moon

They came back.

Of course they came back.

The second visit was different in the way second visits always are: less discovery, more depth. They knew the moonlight's timing, the manuscript's pace, the particular hush of the Starlight Reading Room at three in the morning when the dome made everything look like the inside of a very beautiful idea.

They brought better blankets.

Natalia brought a second notebook. Maya brought her reading journal with new tabs. Alana brought a thermos of cocoa and no explanation for how she had convinced anyone that this was appropriate library behavior. SPARK brought nothing new but was running a finer-resolution scan than the first visit, with Dr. Vessels's expressed approval, to map the full manuscript's page count and entry distribution.

The moon rose through the dome at eight-forty-one.

The pages woke.

They read in the order that felt right: together at first, passing the visible spreads between them as the moonlight moved. An entry from decades ago: a sailor who had been landlocked for years and dreamed of salt water every night, and once had dreamed of a harbor that didn't exist and then found it on a map he had never seen. An entry from recently, probably a child: I dreamed my bookshelf was alive and very opinionated about which books should be next to which other books and honestly I agreed with all its choices.

Alana wrote that one down. "For SPARK," she said.

SPARK accepted this without comment, which was its version of being touched.

At midnight, Maya fell asleep in the reading chair and the manuscript received her again: a new door-forest entry, this one with the figure finally turning around. She did not know what the figure looked like. The dream did not give her that, not yet. But it was turning.

At two, Alana slept. Her new entry was shorter than the first: I dreamed the book I was looking for was the book I was in. I thought that was a problem. Then I thought that was fine.

At four, Natalia slept for the first time on purpose, sitting up in her chair with her notebook on her knees.

The manuscript received her.

SPARK did not read the entry until Natalia had woken and read it herself first. Then it saved three copies in three separate memory partitions.

The entry said:

I dreamed I understood the filing system again. This time I wrote it down. When I woke up the notebook was blank. But the handwriting on the blank pages had pressed through to the page underneath and I think if I hold it to the light I might be able to read it. I will try that tomorrow.

Natalia checked her notebook immediately. The pages were blank.

She held it to the dome light.

She smiled.

Maya and Alana crowded close. SPARK angled an optic.

There, barely visible, pressed through paper by the careful weight of a dreamed hand:

Everything belongs together. You already know why.

Below it, in smaller letters:

Come back. We keep good records here.

THE END
