

Good. Here's the **fully upgraded, clean, partner-ready architecture document** with everything integrated—no gaps, no hand-waving, and no contradictions.

ALLEN GIRLS ADVENTURES (AGA)

SYSTEM ARCHITECTURE (FINAL – PARTNER READY)

1. SYSTEM DEFINITION

AGA is:

A mission-based adaptive learning platform powered by curriculum, delivered through story, validated through gates, and reinforced through interactive gameplay (2D/3D).

2. SYSTEM LAYERS

1. Frontend Experience Layer

- Student App
 - Parent Dashboard
 - Teacher Dashboard
 - Admin / Content Studio
-

2. Game Layer (2D / 3D)

- Embedded mission-based gameplay
 - Puzzle and gate execution
 - World exploration environments
-

3. Application / API Layer

- Auth
 - Mission Engine
 - Gate Engine
 - Progression
 - Analytics
 - AI orchestration
-

4. Content & Curriculum Layer

- Modules (fixed learning units)
 - Missions (mixed subject delivery)
 - World skins (interchangeable context)
 - Dialogue systems
 - Game mappings
-

5. Data Layer

- Student profiles
 - Mastery tracking (per subject)
 - Mission state
 - AI telemetry
 - Reports
-

6. AI Services Layer

- Adaptive engine
- Evaluation engine
- Hinting system

- Boredom detection
 - Recap generation
-

3. CORE SYSTEM RULES

Curriculum Independence

- Modules are NOT tied to worlds
 - Worlds are presentation only
-

Subject Independence

- Each subject adapts separately
 - No forced uniform leveling
-

Mission Design

- Mixed-subject experiences
 - Not “now we do math”
-

Gate-Based Validation

- Crisis = fluency
 - Discovery = reasoning
 - Gateway = mastery
-
-

4. 🎮 GAME LAYER ARCHITECTURE (2D / 3D)

🎯 PURPOSE

Gameplay is:

A learning environment—not a reward layer

🧩 IMPLEMENTATION

Game Container

`GameEmbedContainer`

Supports:

- Phaser (2D)
 - React Three Fiber (3D)
 - Optional Unity WebGL
-

🔄 DATA FLOW

App → Game

- mission_id
- subject
- skill
- difficulty
- world_theme
- gate_type

Game → App

- result

- attempts
 - success/failure
 - telemetry
 - puzzle outputs
-

GAME RULES

- Must directly reinforce lesson
 - Must return measurable output
 - Must respect adaptive difficulty
 - Must not introduce unrelated mechanics
-
-

5. S.P.A.R.K. SYSTEM ARCHITECTURE

DEFINITION

S.P.A.R.K. is:

The adaptive narrative, emotional, and instructional interface of the system

DIALOGUE MODEL

Hybrid System

Type	Use
Pre-authored	Critical moments
AI-assisted	Adaptive moments

PRE-AUTHORED ONLY

- Crisis gates
 - Failure (attempt 3)
 - Gateway results
 - Rewards
 - Emotional reassurance
 - Re-entry recaps
-

AI-ASSISTED (CONTROLLED)

- Encouragement
 - Boredom prompts
 - Light contextual narration
-

TONE MODES

State	Tone
Intro	Wonder + curiosity
Practice	Encouraging coach
Crisis	Silent (visual presence only)
Discovery	Curious guide
Failure (3rd attempt)	Protective
Reward	Proud mentor
Bored	Playful challenger
Re-entry	Calm recap

MODE TRIGGERS

- Gate type
- Attempt count

- AI state (struggling / bored / advanced)
 - Session re-entry
 - Reward state
-

HARD RULES

S.P.A.R.K. must never:

- shame
 - mock
 - rush
 - overwhelm
 - generate open-ended free chat
-
-

6. **AI SAFETY & OUTPUT GOVERNANCE**

CORE RULE

All AI output must pass through:

1. Prompt template
 2. Tone constraint
 3. Age-level filter
 4. Safety moderation
 5. Fallback system
-

PROHIBITED

- Open chat
- Personal probing
- Unsafe suggestions

- Mature content leakage
 - Emotional manipulation
-

FAILURE HANDLING

If AI fails:

- Replace with safe fallback
 - Continue flow
 - Log event
-
-

7. **AI ADAPTIVE ENGINE**

SIGNALS

- Accuracy
 - Speed
 - Attempts
 - Error patterns
 - Hint usage
 - Boredom signals
-

STATES

Struggling

- Scaffold within grade band

Advanced

- Introduce next-grade complexity

Bored

- Increase difficulty
 - Change context
 - Add gameplay variation
 - Offer leadership role
-
-

8. 😐 BOREDOM SYSTEM (FULL)

🔒 TRIGGER

- $\geq 90\%$ accuracy
 - High speed
 - No scaffolds
 - 3–5 successes
 - AFTER puzzle 5
-

🎯 RESPONSE OPTIONS

1. Difficulty escalation
 2. World/context shift
 3. Game interaction shift
 4. Role upgrade
-
-

9. 🚪 GATE SYSTEM

⚡ CRISIS GATE

- Fast
- Local
- No AI delay

- SPARK silent
-

DISCOVERY GATE

- Deep reasoning
 - AI-supported
 - Async
-

LOADING BEHAVIOR

While waiting:

- ambient animation
 - SPARK observation
 - micro-puzzle
-

MICRO-PUZZLE RULES

- ≤ 20 seconds
 - scaffold difficulty max
 - optional
 - no penalty
-
-

GATEWAY CHALLENGE

TRIGGER

- Mastery threshold
 - Not every session
-

SUBJECT-INDEPENDENT

- Unlock per subject
-
-

10. CONTENT VERSIONING MODEL

RULE

Every object has a version:

- module
 - mission
 - lesson
 - world
 - puzzle
 - game
-

SESSION RULE

A student:

stays on the version they started

UPDATE RULE

New versions apply to:

- new sessions only
-

MIGRATION

If deprecated:

- allow completion OR
 - checkpoint reset with SPARK recap
-
-

11. RE-ENTRY SYSTEM

CHECKPOINTS

Saved at:

- guided practice start
 - gate start
 - gate completion
 - pre-gateway
-

STORED

- mission
 - world
 - subject state
 - AI state
 - scaffold level
-

RE-ENTRY

- SPARK recap
 - resume at checkpoint start
-
-

12. LOW-BANDWIDTH STRATEGY

MODEL

Degraded-mode support (not full offline)

AVAILABLE

- cached lessons
 - crisis gates
 - guided practice
 - SPARK pre-authored dialogue
-

REQUIRES CONNECTION

- discovery AI
 - reporting
 - new content
-

BEHAVIOR

- reduce animation
 - swap visuals
 - continue local gameplay
-
-

13. ACCESSIBILITY SYSTEM

REQUIREMENTS

- captions
 - transcripts
 - dyslexia font toggle
 - text size control
 - colorblind-safe palettes
 - reduced motion mode
 - screen reader support
 - keyboard navigation
 - audio guidance
-

GAME REQUIREMENTS

- no color-only signals
 - audio + visual cues
 - optional guidance mode
-
-

14. PARENT / TEACHER DASHBOARD

PARENT

- strengths
 - struggles
 - progress
 - recommendations
-

TEACHER

- class analytics
- skill gaps
- reports

- exports
-
-

15. PLAYTESTING & FEEDBACK LOOP

IN-APP FEEDBACK

Students:

- too easy
 - too hard
 - confusing
 - fun
-

PARENTS / TEACHERS

- report issues
 - flag lessons
 - suggest adjustments
-

USAGE

- QA
 - curriculum tuning
 - AI tuning
-
-

16. BACKEND SERVICES

- Auth Service
 - Profile Service
 - Curriculum Service
 - Mission Engine
 - Gate Engine
 - Puzzle Engine
 - Game Session Service
 - AI Orchestration
 - Progression Service
 - Analytics
 - Reporting
-
-

17. DATA MODEL (CORE)

- Users
 - Student Profiles
 - Modules / Skills
 - Missions
 - Gates
 - Puzzles
 - Game Sessions
 - Mastery
 - Telemetry
 - Reports
-
-

18. MVP / PILOT STRATEGY

◆ PILOT (TRUE MVP)

- 1 world
- 1 subject strand
- 1 mission chain

- guided practice
 - 1 crisis gate
 - 1 discovery gate
 - SPARK core system
 - checkpoints
-

◆ PHASE 2

- second subject
 - second world
 - gateway system
 - dashboards
-

◆ PHASE 3

- 3D expansion
 - analytics scaling
 - full curriculum
-
-

FINAL SYSTEM TRUTH

This is not:

A learning platform with games added

This is:

A game system driven by curriculum, validated through intelligent gates, and controlled by adaptive AI

Good catch. This isn't just a "feature"—this is a **core progression + motivation system**, and it needs to sit cleanly inside the architecture, not float around as a side idea.

I've integrated it properly below as a **first-class system** with corrected numbers, clear logic, and dev-ready structure.

ADDENDUM: AGA REWARDS & PROGRESSION SYSTEM

(Points Economy + Narrative Rewards)

1. CORE PHILOSOPHY (LOCK THIS)

RULE 1: NO PUNITIVE MECHANICS

AGA does **NOT** use:

- lives / hearts
 - streak loss penalties
 - failure-based punishment systems
-

RULE 2: FAILURE IS SAFE

- failure does NOT remove points
 - failure does NOT block progression
 - failure triggers support, not punishment
-

RULE 3: REWARDS = PROGRESS + IDENTITY

Rewards must:

- reflect learning
 - build ownership
 - visualize growth over time
-
-

2. POINTS ECONOMY SYSTEM

CORE MODEL

- Single unified points balance
 - Shared across:
 - Adventure Missions
 - Power Up & Play (arcade)
 - Persistent across sessions/devices
 - Never expires
-

UPDATED POINT VALUES (1/4 + ROUNDED)

Action	Points
Easy puzzle/game	13 pts
Medium challenge	19 pts
Hard challenge/mission	25 pts
First-time completion bonus	+6 pts
Daily login/play	5 pts
Streak milestone (3+ days)	13 pts
Clean run (no hint)	+3 pts

DESIGN INTENT

- Small, frequent rewards
 - Avoid inflation
 - Keep progression steady
-
-

3. POINT SPENDING SYSTEM

PURPOSE

Points must:

unlock identity + curiosity—not power advantages

SPENDABLE ITEMS

Cosmetic

- color palettes
 - avatar frames
 - character outfits
-

Intellectual Rewards

- collectible art
 - museum entries
 - skill passport stamps
-

Narrative Unlocks

- short story clips

- hidden lore
 - SPARK animations
-

Exploration Unlocks

- bonus world areas
 - optional challenge gates
 - secret rooms
-

NEVER ALLOW

- pay-to-win mechanics
 - skill bypass purchases
 - gate skipping
-
-

4. **LONGITUDINAL REWARD SYSTEM (THE REAL ENGINE)**

CORE IDEA

Learning progress = visible world growth

BUTTERFLY SANCTUARY SYSTEM

RULE

Each mastered skill node adds:

👉 A new butterfly species to the player's sanctuary

WHAT IT REPRESENTS

- Each butterfly = real mastery
 - Not cosmetic fluff
 - A living record of progress
-

VARIATION

- Different subjects → different butterfly families
 - Advanced mastery → rare species
-
-

GARDEN CALENDAR SYSTEM

RULE

No streak punishment.

INSTEAD:

- garden grows over time
 - activity accelerates growth
 - inactivity does NOT destroy progress
-

PSYCHOLOGY

- removes anxiety
 - encourages return without guilt
-
-

STORY & COLLECTION SYSTEM

REWARDS

- story chapters
 - collectible artifacts
 - museum expansions
-

PURPOSE

- reinforce curiosity
 - extend narrative engagement
 - connect learning to discovery
-
-

SKILL PASSPORT SYSTEM

FUNCTION

Students earn:

👉 “Passport stamps” per mastered skill

USE

- visible mastery tracking
 - shareable progress artifact
 - parent/teacher alignment
-
-

5. GAMIFIED PARENT APPROVAL (COPPA FLOW)

CORE IDEA

Turn compliance into a reward moment

EVENT

When parent verifies account:

EXPERIENCE

SPARK triggers:

“Commander authorization received.”

REWARD OPTIONS

- unlock family mission
 - rare collectible drop
 - special world access
-

PURPOSE

- remove friction
 - create excitement
 - reinforce narrative
-
-

6. 🧠 SYSTEM INTEGRATION (IMPORTANT)

CONNECTS TO:

✓ Progression System

- XP + titles

✓ Gate System

- clean run bonuses
- mastery rewards

✓ AI System

- reward pacing
- boredom detection signals

✓ Game Layer

- rewards triggered from gameplay
-
-

7. 📊 BACKEND DATA MODEL ADDITIONS

NEW ENTITIES

- `PointsWallet`
- `PointTransaction`
- `RewardItem`
- `Inventory`
- `UnlockEvent`

- ButterflySpecies
 - SanctuaryState
 - GardenState
 - PassportStamp
 - StoryUnlock
 - ParentApprovalEvent
-
-

EXAMPLE TRANSACTION

```
{
  "user_id": "123",
  "event": "CRISIS_GATE_COMPLETE",
  "difficulty": "medium",
  "points_awarded": 19,
  "bonus": {
    "clean_run": 3
  },
  "total_awarded": 22
}
```

8. FRONTEND IMPLEMENTATION

STUDENT VIEW

- Points counter (non-intrusive)
 - Reward pop-ups (short, satisfying)
 - Sanctuary view (persistent world)
 - Garden view (growth visualization)
 - Inventory / collection screen
-

DESIGN RULE

Rewards should feel **earned and discovered**, not spammed.

9. BALANCE RULES

ECONOMY BALANCE

- Points must accumulate steadily
 - Spending should feel meaningful
 - No grinding loops
-

REWARD BALANCE

- Most valuable rewards = tied to mastery
 - Cosmetic rewards = secondary
-
-

10. FINAL POSITIONING

This system avoids:

-  addictive manipulation
 -  punishment loops
 -  competitor cloning
-

And builds:

- ✓ identity
- ✓ ownership

- ✓ long-term motivation
 - ✓ emotional safety
-
-

STRAIGHT TALK

Most platforms get this wrong.

They either:

- over-gamify → addiction
 - or under-reward → boredom
-

This hits the middle:

Motivation without pressure. Progress without punishment.

Alright—this is where most platforms quietly shoot themselves in the foot. Too cheap → everything unlocks in a week. Too expensive → kids stop caring.

Here's a **tight, controlled economy + reward store design** that actually holds up long-term.

AGA REWARD STORE + ECONOMY BALANCING

1. ECONOMY DESIGN GOALS

CORE PRINCIPLES

1. No grind required
 2. Progress feels steady (every session matters)
 3. Big rewards require consistency, not luck
 4. Mastery > cosmetics
 5. No pay-to-win ever
-

TARGET EXPERIENCE

- Session = 20–30 minutes
 - Average points earned/session: **40–90 pts**
 - Small reward every 1–2 sessions
 - Mid reward every 3–5 sessions
 - Big reward every 1–2 weeks
-
-

2. POINT FLOW MODEL

AVERAGE SESSION EARNINGS

Activity	Points
Guided + gates (core play)	30–60
Bonuses (clean run, first-time, etc.)	10–20
Daily + streak	5–15

TOTAL

 ~45–90 points per session

DESIGN NOTE

If kids earn:

- <30 → feels slow
 - 120 → inflation risk
-
-

3. REWARD STORE STRUCTURE

STORE CATEGORIES

1.  Cosmetic Identity
 2.  Collection / Knowledge
 3.  Story Unlocks
 4.  Exploration Unlocks
 5.  Special / Rare
-
-

4. PRICING TIERS (LOCK THIS)

TIER 1 — QUICK WINS (50–120 pts)

Earnable in 1–2 sessions

Examples:

- basic color palettes
- simple avatar frames
- small collectible cards
- SPARK idle animations

TIER 2 — MID REWARDS (150–300 pts)

Earnable in ~3–5 sessions

Examples:

- character outfits
- themed UI skins
- small story clips
- mini collectible sets

TIER 3 — PREMIUM (400–800 pts)

Earnable in ~1–2 weeks

Examples:

- rare outfits
- special SPARK effects
- large collectible sets
- advanced avatar customization

TIER 4 — EXPLORATION (600–1200 pts)

High-value unlocks

Examples:

- secret rooms
- bonus challenge gates
- hidden world areas

TIER 5 — LEGENDARY (1500–3000 pts)

Long-term goals (1+ month)

Examples:

- exclusive story arcs
 - sanctuary expansions
 - rare butterfly variants
 - elite visual identity items
-
-

5. 🧠 UNLOCK DISTRIBUTION STRATEGY

🔒 RULE

Players should NEVER feel stuck saving forever

🎯 STRUCTURE

Every player should always have:

- 3–5 affordable options
 - 2–3 mid-tier goals
 - 1 long-term goal
-
-

6. 🌱 LONGITUDINAL VS STORE BALANCE

🔒 CRITICAL RULE

The BEST rewards are **NOT** purchasable

NON-PURCHASABLE (EARNED ONLY)

- butterfly sanctuary growth
 - passport stamps
 - mastery-based story unlocks
 - major narrative events
-

STORE IS FOR

- expression
 - exploration
 - optional content
-

👉 This prevents:

- pay-to-progress
 - hollow achievement
-
-

7. ECONOMY CONTROL SYSTEM

BACKEND CONTROLS

Track:

- average points per session
 - time to first purchase
 - time to mid-tier unlock
 - hoarding behavior
 - drop-off before purchase
-

ADJUSTMENT LEVERS

- bonus frequency
 - point rewards ($\pm$ small %)
 - item pricing
 - reward drop rates
-

NEVER DO

- sudden large nerfs
 - stealth inflation
 - remove earned value
-
-

8. INTEGRATION WITH GAMEPLAY

GAME REWARDS

2D/3D game segments can grant:

- points
 - collectibles
 - rare drops (low frequency)
-

RULE

Game rewards must:

- align with skill
 - not be random-only
-
-

9. 🎁 REWARD MOMENT DESIGN

🔒 RULE

Reward moments must be:

- quick
 - satisfying
 - not interruptive
-

🎬 EXAMPLE FLOW

- subtle animation
 - +points indicator
 - optional expand (“View reward”)
-
-

10. 🧠 PSYCHOLOGY DESIGN (WHY THIS WORKS)

✓ SHORT LOOP

- frequent small wins

✓ MID LOOP

- visible progress goals

✓ LONG LOOP

- identity + world growth

✗ WHAT WE AVOID

- dopamine spam
 - gambling mechanics
 - pressure loops
-
-

11. SAMPLE PLAYER JOURNEY

WEEK 1

- earns ~300–500 pts
 - buys:
 - 2 small items
 - 1 mid item
-

WEEK 2

- saves for:
 - premium item OR exploration unlock
-

MONTH 1

- unlocks:
 - major area OR legendary cosmetic
 - visible sanctuary growth
-
-

12. ⚠️ COMMON FAILURE MODES (YOU AVOID THESE)

❌ TOO CHEAP

Everything unlocked fast → boredom

❌ TOO EXPENSIVE

Nothing feels reachable → quit

❌ RANDOM ONLY

Feels unfair

❌ PAY-TO-WIN

Breaks trust

13. 🔥 FINAL SYSTEM TRUTH

This economy is built to:

- ✓ reward consistency
 - ✓ respect effort
 - ✓ avoid anxiety
 - ✓ reinforce learning
 - ✓ sustain long-term engagement
-

Here are some clean, **drop-in upgrades + direct answers**.

1. 😐 BOREDOM SYSTEM — FIX THE RIGID TRIGGER

Problem

They're right. Your current trigger:

“≥ 90% + 3–5 successes + after puzzle 5”

...will mislabel:

- careful learners
- slower processors
- thoughtful kids

That's a bug waiting to happen.

✅ FIX (ADD THIS)

🔒 NEW RULE: CONSISTENCY WINDOW

Boredom is triggered by:

A. Performance (required)

- ≥ 85–90% accuracy
- Low error rate

B. Efficiency (relative, not absolute)

- Speed compared to **student's own baseline**, not global average

C. Consistency Window (NEW)

- Sustained high performance across:
 - **2+ mission segments OR**
 - **6–10 interactions**

FINAL LOGIC

Signal	Requirement
Accuracy	High
Speed	Efficient for that student
Consistency	Sustained over time
Scaffolds	Minimal

RESULT

You now distinguish:

- fast + bored 
 - slow + confident 
 - methodical + strong 
-

Bottom line

This change makes your system **adaptive instead of brittle**.

2. LEGENDARY REWARD TENSION — FIX THE MOTIVATION GAP

Problem

They caught a real tension:

“If mastery rewards are the most meaningful... why would a kid grind 3000 points?”

Right now, your Legendary tier is cosmetic-heavy. That's weak.

FIX (REPOSITION LEGENDARY TIER)

NEW RULE

Legendary rewards must be:

Identity-defining + experience-expanding—not just cosmetic

WHAT LEGENDARY SHOULD ACTUALLY BE

NOT

- “cool outfit”
 - “fancier color”
-

SHOULD BE

WORLD-LEVEL UNLOCKS

- hidden zones
 - alternate mission paths
 - secret environments
-

EXPERIENCE MODIFIERS

- “Explorer Mode” (more discovery interactions)
 - alternate puzzle styles
 - remix missions
-

STORY ACCESS

- rare story arcs
- deeper lore

- character backstories
-

SANCTUARY ENHANCEMENTS (IMPORTANT)

- NOT replacing butterflies
 - but enhancing environment:
 - habitats
 - weather effects
 - display expansions
-

FINAL POSITIONING

- **Mastery rewards = proof of learning**
 - **Legendary rewards = expansion of experience**
-

Bottom line

Now kids don't grind for cosmetics—they unlock **new ways to play**.

3. GAME LAYER VERSIONING — CLOSE THE GAP

Problem

They're right. Your content versioning ignores:

- game builds
- asset bundles
- puzzle mappings

That's dangerous.

FIX (ADD THIS SECTION)

GAME VERSIONING RULE

Each game session is pinned to:

- `game_build_version`
 - `asset_bundle_version`
 - `curriculum_mapping_version`
-

SESSION RULE

When a student launches a mission:

The system locks:

- mission version
 - AND game version bundle
-

UPDATE RULE

New game builds:

- apply to **new sessions only**
 - never hot-swap into active sessions
-

FAILSAFE

If mismatch detected:

- fallback to compatible version
 - OR disable game segment and replace with puzzle equivalent
-

Bottom line

You just avoided “game broke mid-lesson” chaos.

4. 🔍 DISCOVERY GATE AI LATENCY — FIX FLOW BREAK

Problem

They nailed it:

Even 3–4 seconds of dead time kills flow.

✅ FIX (ADD HARD RULE)

🔒 RESPONSE TIME TARGET

- Target: **<1.5 seconds**
 - Max acceptable: **2.5 seconds**
-

🔄 FALLBACK SYSTEM (CRITICAL)

If AI exceeds threshold:

OPTION A: PRE-AUTHORED PATH

- Use pre-scored response tree
 - Continue immediately
-

OPTION B: DELAYED VALIDATION

- let player continue
- resolve in background
- SPARK confirms later

OPTION C: HYBRID MODEL (BEST)

- quick local validation
- deeper AI refinement async

UX RULE

Player NEVER waits on a blank state.

Bottom line

Flow stays intact. Always.

5. MULTIPLAYER / SOCIAL — ANSWER IT DIRECTLY

ADD THIS

MVP POSITION

AGA is:

Intentionally single-player in MVP

WHY

- focus on learning integrity
- avoid distraction/social pressure
- simplify safety/compliance

FUTURE (PHASE 4+)

- optional co-op missions
 - asynchronous collaboration
 - shared world events
-

Bottom line

Now you sound intentional—not like you forgot.

6. TEACHER ASSIGNMENT FLOW — ADD THIS

CORE CAPABILITIES

Teachers can:

✓ Assign missions

- by module
 - by subject
 - by skill
-

✓ Adjust difficulty bands

- per student
 - per subject
-

✓ Push reinforcement

- assign retry missions
 - assign targeted practice
-

✓ Track completion

- mission completion
 - gate performance
 - mastery status
-

RULE

Teacher overrides:

- guide pacing
 - NOT override core adaptive engine
-

Bottom line

This is required for school adoption.

7. PRIVACY — ADD FERPA

ADD THIS LINE

AGA is designed for COPPA compliance (child data protection) and must meet **FERPA requirements** for school-based deployments, including controlled data access, auditability, and educational record protection.

Bottom line

You now sound enterprise-ready.

8. PILOT SUCCESS METRICS — DEFINE THEM

ADD THIS

PILOT SUCCESS = 4 METRICS

1. COMPLETION RATE

- $\geq 75\%$ finish mission
-

2. RETURN RATE

- $\geq 60\%$ return within 3 days
-

3. GATE SUCCESS

- $\geq 70\%$ pass with ≤ 3 attempts
-

4. ENGAGEMENT SIGNAL

- $\geq 80\%$ positive feedback (“fun / not confusing”)
-

BONUS METRIC

- time-on-task (not drop-off)
-

Bottom line

Now you can actually prove success.

9. SYSTEM CONSTRAINTS (ADD THIS SECTION — VERY IMPORTANT)

Put this near the top.

AGA WILL NEVER:

- use open-ended AI chat
 - punish failure
 - remove progress
 - sell progression advantages
 - use streak-loss anxiety
 - rely on gambling mechanics
 - allow unsafe AI outputs
 - break session continuity
 - override mastery with purchases
-

PURPOSE

Make your philosophy:

instantly visible

Bottom line

This is exactly what partners look for.

FINAL VERDICT

Conflicts:

None

Improvements:

- removes ambiguity
 - strengthens credibility
 - closes technical gaps
 - aligns system philosophy
-
